General Description

The Image video amplifier is an adjustable compensation amplifier designed to correct for video losses over various types of cable. It is available as a separate rack mount module, or can be built into various camera control units.

The video amplifier, powered from 12 volts DC has full adjustments for video gain, low frequency gain, and high frequency gain to compensate for up to 3500 feet of standard RG59U type coaxial cable.

The amplifier can be mounted into 12", 19" rack enclosures or adapted to mount inside of any type of video equipment requiring cable loss compensation.
