CRAWLER CONTROLLER

General Description

Crawler controllers are available in both rack mount and desktop styles. The rack mount model is mounted in a 12" wide 5-1/4" standard rack mount enclosure, while the desktop version comes in a sloped front metal enclosure for sitting on top of a desk surface.

Both models feature a transformer isolated out put that is fuse protected, and has meters for both voltage and current output. They can be configured to power any type of camera crawler and various input and out voltages.

The rack mount style is often chosen when configuring a Model 2 camera inspection system with built in crawler controller and is the same size as the Model 2 camera control unit so can be mounted in a dual rack mount. The desktop version is often chosen when upgrading an existing inspection system.
