LATERAL CUTTER

General Description

The Image lateral cutter is unique in its all aluminum lightweight construction. It has dual color cameras built in and is stabilized during cutting operations by a pneumatic position stabilizer. Cutting is done by a 30,000 rpm pneumatic air motor. There is a variable speed cutting and position control. The light weight construction makes this cutter ideal for hand and rod operation or use in conjunction with any Image Model 2 mini camera crawler system.

The built in cameras feature 380 lines of resolution and 4 lux sensitivity with a 74 degree field of view. Operations require a controlled compressed air source, and connection to an Image camera control unit. The cutter features a joystick control for positioning of the cutting tool. This is a simple cost effective way to reinstate laterals.
