

### General Description

The model 12 control unit is one of our smallest models of portable camera control units. It features a built in 8" color LCD monitor with sun shade, digital recorder with USB, and video out connector for connecting to a separate recording device. It has an adjustable light power supply and connects to a pushrod reel with slip ring and mini colour camera. The camera is a 1.6" diameter self level color camera with 18 LED lights.

The control unit, monitor, and battery pack are housed in a rugged waterproof case about the size of a small briefcase. The case also holds the Lithium battery, battery charger, and interconnect cables. The Model 12 system is ideal for pipe, wall, and air duct inspections as well as many industrial type applications. The system is standard with a 200 foot pushrod cable.
